

## Voyager Record Relationships

The **Bibliographic Record** contains all of the bibliographic description about the book: Title, Author, Publisher, Physical Description, etc.

The **Holding Record** contains all of the information regarding the locations and call numbers. A separate holding record exists for every unique combination of location (including sublocation) and call number (i.e. one holding record for volumes 1 and 2 in Krrr Reference with same call number and another holding record for volumes 1 and 2 in the Main Library with the same call number).

The **Item Record** contains information unique to the item in hand: e.g. the barcode, copy number, copy-specific notes, volume designations, item type, and item status.
